

**FB4A (50/60 Hz)
Direct - Expansion
Fan Coil
18,000 Thru 70,000 Btuh**

Turn to the Experts™

Product Data

Carrier's FB4A Direct Expansion multipoise fan coils are designed to cover a wide range of air handling requirements. They are compact and ready to fit where needed — in the basement, crawlspace, attic, utility room, or closet.

Features/Benefits

- 8 sizes from 1.5 up to 6 ton cooling capacity.
- High static up to 0.7 inch water (175 Pa) for all sizes.
- A-coil design for sizes 48 – 70, and sloped-coil for sizes 18 – 42.
- Efficient lanced sine-wave aluminum fins.
- High-impact thermal plastic condensate pan.
- Primary and secondary drain connection with brass inserts.
- Multipoise design for maximum versatility.
- Field installation heater packages.
- Solid state interlock control board with built-in fuse.
- 1-inch thickness rubber cabinet insulation with 32 kg/m³ density.
- Sweat type connection.
- Multiple electric entries.
- Inspection plate to facilitate cleaning the coil.
- 3-speed motors for all sizes, in field selection.
- Polyester powder painted steel cabinet to withstand harsh Middle Eastern climatic conditions.
- Replaceable 5-amp. Blade-type auto fuse protects against transformer secondary short.
- 40 VA. 208/230 V transformer.
- Permanent filter with aluminum frame 1 inch, flame retardant polyester fibers.
- 208/230 V 1phase 60 Hz and 220 V 1 phase 50 Hz models are available.

FB4A direct expansion fan coil is designed for medium and high static pressure, up to 0.7 inches water (175 Pa) with cooling capacity from 5.3 k watt (18.0 kbtuh) to 21.5 k watt (73.4 kbtuh).

FB4A series is available in eight sizes with an airflow from 236 l/s (500 CFM) to 920 l/s (2000 CFM). FB4A series can be installed vertical or horizontal. Coils are made of efficient lanced sine-wave aluminum fins mechanically bonded to copper tubes for superior heat transfer. 1-inch thick rubber

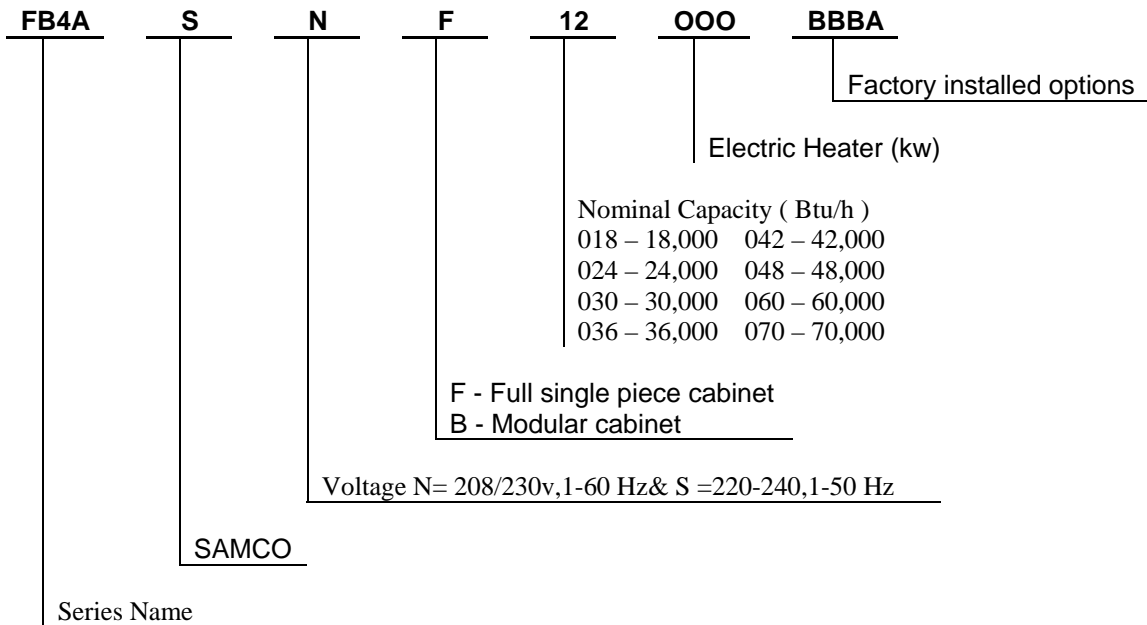

cabinet insulation with density 32 kg/m³ minimize energy losses and increase unit efficiency. FB4A series comes with polyester powder painted zinc coated galvanized steel casing. Super quiet multi 3 speed motor for field selection & electric heaters are available option at field installation.

* Use copper wire only. Use 75°C only in this application. When using non-metallic (NM) sheathed cable, wire size required should be based on that

of 60°C conductors, instead of wire sizes shown in table above per NEC Article 336-26.

‡ Based on FB4B.

FLA — Full Load Amps

NOTE: If branch circuit wire length exceeds 100 ft, consult NEC 215-2 to determine maximum wire length. Use 2% voltage drop.

Multipliers to Determine the Performance With Other Indoor Coils

Condenser N. Cap. MBtuh	Evaporator N. Cap. MBtuh	Cooling Cap.	Power
18	24	1.10	1.07
24	30	1.05	1.05
30	36	1.03	1.05
36	42	1.04	1.05
48	60	1.05	1.05
60	70	1.02	1.03

Notes:

- Net Capacities shown include a deduction for evaporator fan motor heat.
- Formulas:
Leaving db= Entering - Sensible Heat Cap./(1.09 x CFM)
Leaving wb= wb corresponding to air leaving coil (hwb)
h wb leaving = hwb entering - Total Cap(Btuh)/(4.5 X CFM)
- Direct Interpolation Permissible. Do not extrapolate.

NOTES:

- Airflow based upon dry coil at 230v with factory approved filter and electric heater (2 element heater, sizes 018 through 036; 3 element heater, sizes 042 through 060).
- To avoid potential for condensate blowing out of drain pan prior to making drain trap:
 - Return static pressure must be less than 0.4 in. wc
 - Horizontal applications of 048-070 sizes must have supply static greater than 0.20 in.wc

* Blower motor heat not included.

When using units with 20-, 24-, and 30-kw electric heaters, maintain a 1-in. clearance from combustible materials to discharge plenum and ductwork and maintain a distance of 36 in. from the unit. Use an accessory downflow base to maintain proper clearance on downflow installations.

Use flexible connectors between ductwork and unit to prevent transmission of vibration. When electric heater is installed, use heat resistant material for flexible connector between ductwork and unit at discharge connection. Ductwork passing through unconditioned space must be insulated and covered with vapor barrier.

METHOD: Estimated Fan Sound Power (in decibels 10E-12 watts) is calculated in accordance with procedure described in ASHRAE 1987 HVAC "Systems and Applications Handbook," Chapter 52, "Sound and Vibration Control," using the "Specific Sound Power Level" approach.

ACCURACY: This is a prediction method, based on an accepted method which has demonstrated satisfactory results in field applications. However, field test results may generate sound pressure values which differ from these predicted values, as the current state of the art in determining sound power varies in accuracy from 0.2 db in mid-range (250 to 4000 Hz bands) to 3 to 4 db in 125 and 8000 Hz bands and up to 6 to 8 db in 63 Hz band.

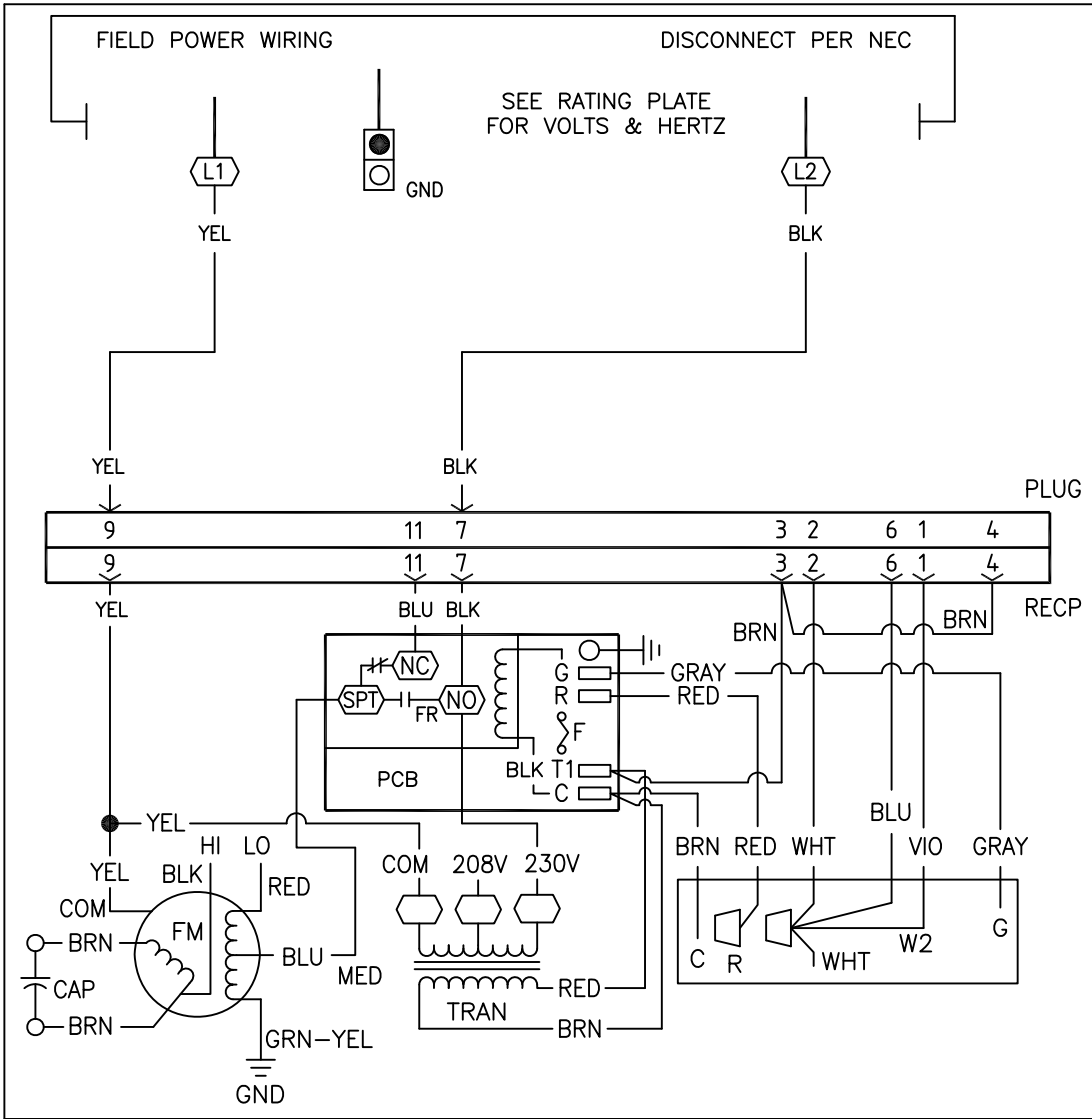

MINOR CHANGES: Use for estimating sound power at other conditions of airflow and external static pressure.

Guide Specification

FB4A HIGH STATIC CHILLED WATER FAN COIL NORMAL COOLING CAPACITY 1 TO 6 TON, ELECTRIC HEATER OPTION (FIELD INSTALATION) 500:2000 CFM

Carrier MODEL NUMBERS FB4A GENERAL

SYSTEM DESCRIPTION

The fan coil unit is designed for outdoor (or under ceiling) installation, electrically controlled cooling and heating (option). Unit shall be designed for vertical and horizontal installation. Standard unit shall include permanent filter with aluminum frame. Unit shall be designed for medium and high external static pressure up to 0.7 inch water.

QUALITY ASSURANCE

- Unit shall be rated in accordance with ARI standard # 410/91.
- Installation and adhesive shall meet NFPA90A requirements for flame spread and smoke generation.
- Unit casing shall be capable of withstanding 500 hour salt spray exposure per ASTM B117 (scribed specimen).
- Unit shall be manufactured in facility registered to ISO9001:2000/BS5750, part2.

PRODUCTS

A. The unit shall be factory assembled single piece cooling unit, with optional electric heat (field installation). Unit cabinet shall be constructed of galvanized steel bonderized and powder painted

enamel finish. The unit shall be insulated with rubber insulation that is 1 inch thickness & 32 kg/m³ density.

B. Unit cabinet panels shall be single skin. Cabinet panels shall be easily removable for service.

C. Unit shall have a permanent type filter with 1 inch aluminum frame. Filter shall be flame retardant polyester fibers. Filters shall be accessible through an access panel.

D. Units shall have high impact thermal plastic sloped condensate pan. Unit shall have primary and secondary drain connection with brass inserts. Unit shall have additional external drain pan for the coil connection condensate water.

E. The unit fan wheel shall be directly connected to the motor. The fan wheel shall be made from steel with a corrosion resistance finish, it shall be a dynamically balanced and double inlet forward curved blades. Unit fan wheel chamber shall be made from galvanized steel.

F. Unit coil shall have aluminum fins mechanically bonded to seamless smooth copper tubes with all joints brazed. Unit coil shall be accessible through an access panel for cleaning. The coil connection shall be sweat type.

G. The unit fan motor shall have permanently lubricated sleeve bearing. The motor shall have overload protection and B class insulation. Unit shall have multiple electric entries for more flexibility.

I. Unit control board shall be 24 VAC and UL listed.
